

Fluorescent lamps T5

958 BIO vital

Application

The lamp BIO vital has, along with the full spectrum of visible rays, additional UVA and UVB components and virtually complies with natural sunlight. Because of its very good colour rendering and high colour temperature (5800K) it is ideal for use in rooms with little natural daylight, especially as high quality lighting for the work place and is also suitable for light therapy. Typical areas of use are high quality work place lighting, doctor's practices, dental laboratories, schools and play schools as well as for light therapies.

Main technical data

Type	Nominal wattage	Light colour	Colour rendering class	Luminous flux	Class of energy efficiency	Life time (3B50 / KVG)	Cap
